

Integrate your website with Worldpay in 5 steps

Getting started

HTML coding

Take a test transaction

Request a system check

Start transacting

Important information:

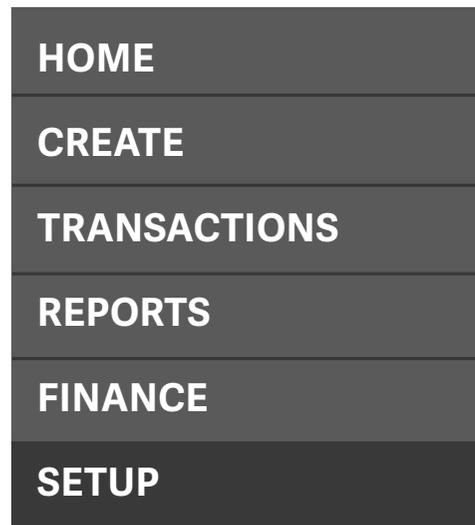

The basic integration guide shows you how to create a “buy this” button for your site, the example given is for a single product but the form can be used multiple times to create multiple buttons for multiple items.

If you need something more complex see the full integration guide to create your own solution.

[Full guide](#)

Business Manager is the portal which enables your website integration with Worldpay. Before carrying out the next steps you need to log on to Business Manager, to access important information on how to integrate your website.

Once you've logged in to Business Manager select **Setup** from the left hand options menu.

When you're in the **Setup** area click **Installations** and make a note of the installation ID called **Select Junior** as you'll need it later on in Step 2.

Now you're ready to begin the HTML coding stage of the integration.

All you need to do is insert the following code into the HTML page on your website. Just copy and paste all the coding detailed below:

```
<form action="https://secure-test.worldpay.com/wcc/purchase" method=POST>

<!-- This next line contains the testMode parameter - it specifies that the submission is a test submission -->
<input type="hidden" name="testMode" value="100">

<!-- This next line contains a mandatory parameter. Put your Installation ID inside the quotes after value= -->
<!-- You will need to get the installation ID from your Worldpay account. Login to your account, click setting and under installations
you should have an option called select junior and a number, put the number between "" e.g. "123456"-->
<input type="hidden" name="instId" value="Your installation ID">

<!-- Another mandatory parameter. Put your own reference identifier for the item purchased inside the quotes after value= -->
<input type="hidden" name="cartId" value="Your ID for the product">

<!-- Another mandatory parameter. Put the total cost of the item inside the quotes -->
<input type="hidden" name="amount" value="10.99">

<!-- Another mandatory parameter. Put the code for the purchase currency inside the quotes after value= -->
<input type="hidden" name="currency" value="GBP">

<!-- This creates the button. When it is selected in the browser, the form submits the purchase details to us. -->
<input type=submit value=" Buy This ">

</form>
```

 You'll need to change
2 pieces of the code

- ✓ **Installation ID** – change this to the number you made a note of in step 1.
- ✓ **Product ID** – change this to a unique reference of your choice. This will be visible when a customer takes a transaction so this should be customer friendly e.g. emmascakes
- ✓ **Amount value** – change this to the price (incl. VAT) that you wish to charge the customer.

IMPORTANT INFORMATION:

It's really important you don't remove the "" marks in the coding and make sure there are no spaces. E.g. `<input type="hidden" name="instId" value="1234567">`
Once you've completed this step save the web page and if necessary publish it to your website.

Updating your website HTML

To get ready to take a test transaction you'll need to make sure your website is in test mode. You'll need to specify the Test Environment URL and include the test mode parameter in your website HTML as follows:

```
<form action="https://secure-test.worldpay.com/wcc/purchase" method=POST>
< input type=hidden name="testMode" value="100">
```

Once you're in test mode follow the steps below:

1 Enter test card details into your payments form

Use the following card details below to take a test transaction.

- **Payment method:** Visa
- **Visa card number:** 4444333322221111
- **Cardholder name:** AUTHORISED
- **CVC:** 555
- **Expiry date:** any date in the next 7yrs
- **Address details:** any of your choice

2 Check to make sure that your test payment was successful

You should see an Authorised or Successful notification appear.

If you experience an error message during this stage email our Technical Support Team at support@worldpay.com. Please let us know your installation id (instId) and a screenshot of the error message and our team will get back to you.

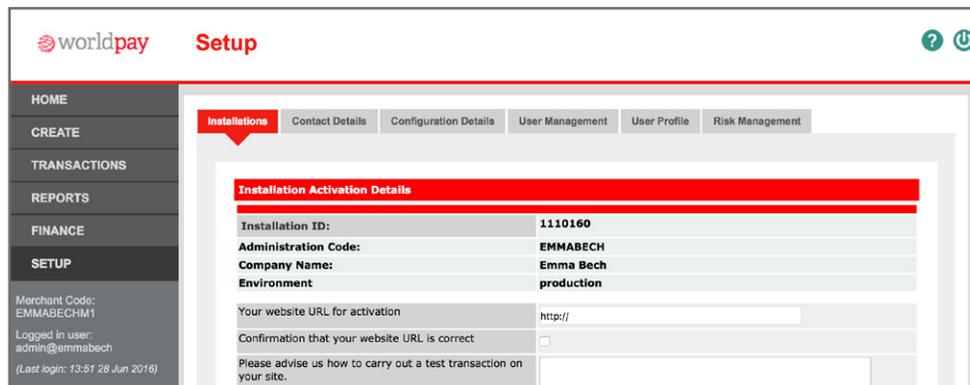

Some common errors to check for are:

- Not setting testMode to = 100
- Using a large test amount - please try 1.00
- Using a currency not on your account – try GBP, EUR or USD

Request a system check

Once you've taken a successful test transaction we'll need to run a system check to make sure you're ready to go live. To let us know you're ready for us to carry out these checks please complete the following:

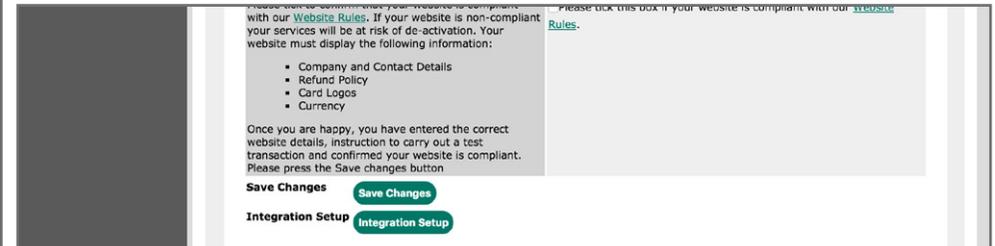

- ✓ Log in to [Business Manager](#) and go to the **Setup** section where you can see a list of installations.
- ✓ Select the tick button in the **Activation** column for the installation you need to be checked.
- ✓ Complete the field **URL** with the website address of the new page that you've created. Write in the notes section 'Please test this account' and hit **Save Changes**.

The screenshot shows the Worldpay Setup interface. The left sidebar contains navigation options: HOME, CREATE, TRANSACTIONS, REPORTS, FINANCE, and SETUP. The main content area is titled 'Setup' and has a sub-header 'Installations'. Below this, there are tabs for 'Contact Details', 'Configuration Details', 'User Management', 'User Profile', and 'Risk Management'. The 'Installation Activation Details' form is highlighted with a red border. It contains the following information:

Installation ID:	1110160
Administration Code:	EMMABECH
Company Name:	Emma Bech
Environment:	production
Your website URL for activation	http://
Confirmation that your website URL is correct	<input type="checkbox"/>
Please advise us how to carry out a test transaction on your site.	

At the bottom left of the page, there is a sidebar with the following text: Merchant Code: EMMABECHM1, Logged in user: admin@emmabech, (Last login: 13:51 28 Jun 2016).

The screenshot shows a confirmation dialog box with the following text:

Please tick this box if your website is compliant with our [Website Rules](#). If your website is non-compliant your services will be at risk of de-activation. Your website must display the following information:

- Company and Contact Details
- Refund Policy
- Card Logos
- Currency

Once you are happy, you have entered the correct website details, instruction to carry out a test transaction and confirmed your website is compliant. Please press the Save changes button

Save Changes **Save Changes**

Integration Setup **Integration Setup**

Once you've sent us the request we'll start running the necessary system checks. There are a number of things we have to do so this can take up to 48hrs. If there are any changes that you need to make we'll be in contact to let you know.

Important information: We'll send a confirmation email to the account holder on your Worldpay account. If you're a web developer working on behalf of the account holder please ask them to look out for this email.

Go Live

Once we've completed the system check, your account will be approved for live transactions so you can make the final changes to your webpage HTML to move from test mode into live mode.

Replace this line

```
<form action="https://secure-test.worldpay.com/wcc/purchase" method=POST>
```

With

```
<form action="https://secure.worldpay.com/wcc/purchase" method=POST>
```

And

```
<input type="hidden" name="testMode" value="100">
```

With

```
<input type="hidden" name="testMode" value="0">
```

Just to make sure everything is running smoothly we recommend that you take a final test transaction with a live card as if you were a customer. We'd suggest using a small amount and you can always refund this afterwards.

Need help?

If you need help getting your website integrated with our payments gateway call our Technical Support Team on 0870 366 1233 option 5; for any other queries please select option 2 to speak to our Account Boarding Team.
