PCMA 3.4.0 – 3.4.1 Release Notes

worldpay

PCMA for SAP ECC

Payment Card Management and Analytics (PCMA) is the component used to integrate SAP to the B2B Gateway for authorization and settlement processing and provides the B2B Receivables, Analytics and Reconciliation value added solutions within SAP.

These release notes cover the following full and patch releases:

PCMA Version	Transport Files	Release Date
3.4.0 full	K901022.B60 R901022.B60	15 March 2024
3.4.1 patch	K901026.B60 R901026.B60	15 May 2024

NOTE: For information on prior releases, refer to the [Paymetric Assist](#) help site.

New Features and Enhancements

3.4.0 New Features and Enhancements
Stored Credentials: Added support for handling CIT/MIT message type for the stored credentials transaction framework mandates to streamline implementation within SAP.
Standardize Report Messaging: Made the no results message of the following reports consistent with other reports by providing a pop-up indicating no data found that matches selection criteria. • Expiring Payment Card Authorizations • Multi-capture Authorizations • Payment Card Worklist • Reauth & Release Billing documents

Problems Addressed

3.4.0 Problems Addressed
Web AR: Changes to the WEB AR BAPI for tokenized eCheck details not being updated in FPLTC and BSEGC.

3.4.1 Problems Addressed
Override percentage field was not editable in the new ALV layout for Single and Multi-Customer Open AR.

Compatibility and Basic Requirements

The following is applicable for the full and all patch releases.

- SAP ECC 6.0, ABAP 702 Support Pack 0018 minimum
- Paymetric SAP components:
    - PAS – 2.10.1

        NOTE: This release should be backwards compatible back to PAS 2.8.0; however, it was tested with 2.10.0. If you are implementing tokenization through TMS, 2.10.0 minimum is required.

    - XiSecure SAP ECC IK – 3.5.0

Install and Configuration Notes

New Installs

Version 3.4.0	Install this full transport first.

Refer to the *XiPay Platform SAP ECC Integration Guide* for install, setup, and integration details.

Upgrades

If you are on a version prior to the latest full transport, install the full one and all subsequent patch transports.

PCMA 3.4.0 – 3.4.1 Release Notes

worldpay

- If you are on a version later than the latest full transport, verify all patch transports between your version and the latest are installed before installing the latest.

- For ALL upgrades, even if PCMA IMG modifications are not required for the upgrade, you must execute the PCMA IMG transaction code (/n/PMPAY/PIMG) to initiate the objects from the upgrade.

- When importing the transport(s):

    o The '**overwrite existing objects**' flag should be selected since many of these are existing objects.

    o Allow sufficient time for each transport to complete before loading the next one to prevent syntax errors.

- Any custom changes (including userexits configured in the PCMA IMGs) should be evaluated and may need to be replicated in the new later versions of these userexits. There may be new userexits that were not in your previous version - please review the documentation for details.

- If upgrading from a previous/older version of PCMA, it is advised you recreate any custom userexits that are configured in /PMPAY/PIMG. They should be recreated based on the new sample default userexits that are provided.

- As always, please test thoroughly before moving to PRD. If you would like to obtain consulting assistance with this install, please contact Support Services.

Objects Modified

This section identifies any objects modified that should be considered when upgrading if you have customizations a stated above under Upgrade section.
